DETAILED ACTION

The applicant's response filed September 1, 2004, to the restriction requirement mailed on August 3, 2004, is acknowledged. However, the previous restriction requirement is hereby withdrawn. A new restriction requirement is presented below.

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 55-61, drawn to a conductive connection forming method, classified in class 438, subclass 761.
 - II. Claims 62-63, drawn to an oxidation protection method for metal-containing material during semiconductor processing, classified in class 438, subclass 770.
 - III. Claims 64-68, drawn to an integrated circuit via forming method, classified in class 438, subclass 614.
 - IV. Claims 69-78, drawn to an integrated circuit wire bond forming method, classified in class 438, subclass 617.
- 2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions:

Invention I is different from other inventions (II, III, IV), because invention I is draw to a conductive connection forming method comprising transforming at least a part of the first layer

to a transformed material; on the other hand, the inventions (II, III, IV) draw to an oxidation protection method for metal-containing material during semiconductor processing, an integrated circuit via forming method, and an integrated circuit wire bond forming method.

Invention II is different from other inventions (I, III, IV), because invention II is draw to an oxidation protection method for metal-containing material during semiconductor processing; on the other hand, the inventions (I, III, IV) draw to a conductive connection forming method comprising transforming at least a part of the first layer to a transformed material, an integrated circuit via forming method, and an integrated circuit wire bond forming method.

Invention III is different from other inventions (I, II, IV), because invention I is draw to an integrated circuit via forming method; on the other hand, the inventions (I, II, IV) draw to a conductive connection forming method comprising transforming at least a part of the first layer to a transformed material, an oxidation protection method for metal-containing material during semiconductor processing, and an integrated circuit wire bond forming method.

Invention IV is different from other inventions (I, II, III), because invention IV is draw to an integrated circuit wire bond forming method; on the other hand, the inventions (I, II, III) draw to a conductive connection forming method comprising transforming at least a part of the first layer to a transformed material, an oxidation protection method for metal-containing material during semiconductor processing, and an integrated circuit via forming method.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2822

Because these inventions are distinct for the reasons given above and the search required for any Group is not required for the other Groups, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

3. This application contains claims directed to the following patentably distinct species of the claimed invention:

If Applicant selects Invention Group IV, Applicant is required to elect a single species.

Species 1: Figs. 7, 8, 9, 10 and 12 (suggested claims 69-73).

Species 2: Figs. 7, 8, 9, 11 and 12 (suggested claims 74-78).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Application/Control Number: 10/620,468

Art Unit: 2822

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh Y. Tran whose telephone number is (571) 272-2110. The examiner can normally be reached on M-F (9-6:30pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on (571) 272-1852. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
